Health Timer Lock Mechanism

Royal Vendor's Health Timer lock, an automatic mechanical and electronic locking mechanism, prevents customers from taking food items out of the cooler if the cooler temperature rises above 41°F for a predetermined period, following FDA and NSF guidelines for potentially hazardous prepackaged foods.

This safety measure is being followed by health departments in many areas and is expected to become more frequently enforced as Micro-Market, and other unattended operations increase in popularity.

Royal Vendor's "smart" software allows for loading the cooler without activating the Health Timer lock, and should the cooler be locked because of a temperature increase, a field technician can easily open the cooler for servicing.
